Finance and Politics

Political risk and the international bond market between the 1848 revolution and the outbreak of the First World War¹

By NIALL FERGUSON

SUMMARY

This article uses price data and editorial commentaries from the contemporary financial press to measure the impact of political events on investors' expectations from the middle of the nineteenth century until the First World War. The main question addressed is why political events appeared to affect the world's biggest financial market, the London bond market, much less between 1881 and 1914 than they had between 1843 and 1880. In particular, I ask why the outbreak of the First World War, an event traditionally seen as having been heralded by a series of international crises, was not apparently anticipated by investors. The article considers how far the declining sensitivity of the bond market to political events was a result of the spread of the gold standard, increased international financial integration, or changes in the fiscal policies of the great powers. I suggest that the increasing national separation of bond markets offers a better explanation. However, even this structural change cannot explain why the London market was so slow to appreciate the risk of war in 1914. To investors, the First World War truly came as a bolt from the blue.

Traditionally, historians have tended to portray the two decades before the outbreak of war as a time of 'mounting tension' and 'escalating crises'. A not untypical example was the structure of the 11 volume official series of diplomatic documents, *The British documents on the origins of the war, 1898–1914*, published between 1926 and 1938:

- I. The end of British isolation
- II. The Anglo-Japanese alliance and the Franco-British entente
- III. The testing of the entente, 1904–6
- IV. The Anglo-Russian rapprochement, 1903–7
- V. The Near East: the Macedonian problem and the annexation of Bosnia, 1903–9
- VI. Anglo-German tension: armaments and negotiation, 1907–12
- VII. The Agadir crisis
- VIII. Arbitration, neutrality and security
- IX. Part 1. The Balkan Wars: the prelude. The Tripoli War; Part 2. The Balkan Wars: the league and Turkey
- X. Part 1. The Near and Middle East on the eve of war; Part 2. The last years of peace
- XI. The outbreak of war

We estimate the impact of coups and top-secret coup authorizations on asset prices of partially nationalized multinational companies that stood to benefit from U.S.-backed coups. Stock returns of highly exposed firms reacted to coup authorizations classified as top-secret. The average cumulative abnormal return to a coup authorization was 9% over 4 days for a fully nationalized company, rising to more than 13% over 16 days. Precoup authorizations accounted for a larger share of stock price increases than the actual coup events themselves. There is no effect in the case of the widely publicized, poorly executed Cuban operations, consistent with abnormal returns to coup authorizations reflecting credible private information. We also introduce two new intuitive and easy to implement nonparametric tests that do not rely on asymptotic justifications. *JEL* Codes: F50, G14.

Coups, Corporations, and Classified Information

- Covert operations were a key component of superpower foreign policy during the Cold War.
- Goal: replacing unfriendly regimes, who had expropriated multinational corporate property.
- Were CIA operations secret?
 - If operations were secret, we should observe no price impact on those multinationals.
 - If the secret was out (or if CIA agents traded themselves), we may see a price impact of coup authorizations.

Chile 1971-73

"Anaconda was one of those on the plus side, rising $\frac{7}{8}$ to $22\frac{7}{8}$. Its strength was attributed partly to the revolt yesterday in Chile against the Marxist government, which, in 1971, expropriated the holdings of Anaconda and other U.S. companies.".- September 12, 1973 quote from the Wall Street Journal

Coups, Corporations, and Classified Information

Cuba 1961

“Stock prices, like bond prices, advanced at first in sympathy, and then declined with disagreement over the unsuccessful invasion attempt. For instance, on the big board, Cuban American Sugar, largely American owned, and with some diversification in this country, rose $4\frac{3}{8}$ points to $23\frac{3}{4}$, a new high for the year, but closed on Friday at $19\frac{3}{4}$.” - April 23, 1961 New York Times article.

Five Coups

- Iran 1953 against :
 - CIA and MI6 helped depose prime minister Mossadegh, leaving the Shah with full powers.
 - Mossadegh had nationalized oil fields and a refinery from the Anglo-Iranian Oil Company (predecessor to BP).
- Guatemala 1954:
 - The CIA deposed Arbenz after he nationalized assets of the United Fruit.
- Congo 1960-61:
 - The US and Belgium operated against president Lumumba:
 - Lumumba refused to allow Katanga to secede (a copper-rich enclave controlled by a Belgian multinational).

Five Coups

- Cuba 1961:
 - Castro nationalized all US property.
 - The CIA organized the Bay of Pigs invasion (mostly using Cuban exiles).
- Chile 1973:
 - Copper nationalizations started under Frei, but under Allende compensations were lower and expropriations more frequent.
 - CIA helped organize the coup that deposed Allende and installed Pinochet.

- For a hypothetical company that was fully nationalized:
- The average four-day stock return for an authorization event is 9.4%, with a standard error of 2.7%.
- Cumulative abnormal returns are significant from 4 to 13 days after the event.
- Cumulative returns increase from 4 to 16 days, consistent with private information being incorporated with delay (see Kyle 1985).

Belief Disagreement and Portfolio Choice

**Maarten Meeuwis, Jonathan A. Parker, Antoinette
Schoar & Duncan I. Simester**

WORKING PAPER 25108

DOI 10.3386/w25108

ISSUE DATE September 2018

REVISION DATE June 2021

Using proprietary portfolio data on millions of households, we show that (likely) Republicans increase the equity share and market beta of their portfolios following the 2016 presidential election, while (likely) Democrats rebalance into safe assets. We provide evidence that this behavior is driven by investors interpreting public information using different models of the world, by ruling out the main non-belief-based channels (like income hedging needs, preferences, local economic exposure) using detailed controls for ex ante wealth and investments, demographics and income, and even county-employer-period fixed effects. These findings are driven by a small share of investors making big changes in allocation, and are stronger among investors who are more attentive to their portfolios or who do not delegate their investment decisions.

Voting with their Sandals: Partisan Residential Sorting on Climate Change Risk

Asaf Bernstein, Stephen B. Billings, Matthew Gustafson, and Ryan Lewis

NBER Working Paper No. 27989

October 2020, Revised February 2021

JEL No. D10,D72,G1,G5,Q5,Q54,R2,R21,R23,R31

ABSTRACT

Climate change partisanship is reflected in residential choice. Comparing individual occupants at properties in the same zip code with similar elevation and proximity to the coast, registered republicans (democrats) are more (less) likely than independents to own houses exposed to sea level rise (SLR). Findings are unchanged controlling flexibly for other individual demographics and a variety of granular property characteristics, including the value of the home. This sorting is driven by differential perceptions of long-run SLR risks across the political spectrum not tolerance for current flood risk or preferences for correlated coastal amenities. Observed residential sorting manifests among owners regardless of occupancy, but not among renters. We also find no residential sorting in relation to storm surge exposure, which is a primary driver of current flood risk. Anticipatory sorting on climate change informs models of migration in the face of long-run risks and suggests households that are most likely to vote against climate friendly policies and least likely to adapt may ultimately bear the burden of climate change.

VALUING PEACE: THE EFFECTS OF FINANCIAL MARKET EXPOSURE ON VOTES AND POLITICAL ATTITUDES

SAUMITRA JHA

Graduate School of Business, Stanford University

MOSES SHAYO

Department of Economics, The Hebrew University of Jerusalem

Can participation in financial markets lead individuals to reevaluate the costs of conflict, change their political attitudes, and even their votes? Prior to the 2015 Israeli elections, we randomly assigned Palestinian and Israeli financial assets to likely voters and incentivized them to actively trade for up to 7 weeks. No political messages or nonfinancial information were included. The treatment systematically shifted vote choices toward parties more supportive of the peace process. This effect is not due to a direct material incentive to vote a particular way. Rather, the treatment reduces opposition to concessions for peace and changes awareness of the broader economic risks of conflict. While participants who were assigned Palestinian assets are more likely to associate their assets' performance with peace, they are less engaged in the experiment. Combined with the superior performance of Israeli stocks during the study period, the ultimate effects of Israeli and Palestinian assets are similar.

KEYWORDS: Conflict, financial markets, field experiment, peace, voting.

Asset Market Perspectives on the Israeli–Palestinian Conflict

By ASAF ZUSSMAN[†], NOAM ZUSSMAN[‡] and MORTEN ØRREGAARD NIELSEN[†]

[†]*Cornell University*

[‡]*Bank of Israel*

Final version received 14 September 2006.

This paper locates turning points in the Israeli–Palestinian conflict since the late 1980s using asset market data from Israel and the Palestinian Authority (PA). We find that major escalations in violence, such as the outbreak of the Intifada in 2000, lead to significant declines in asset prices in both Israel and the PA. Conversely, major peace initiatives, such as the Oslo accords in 1993 and the Road Map plan in 2003, lead to substantial increases in asset prices on both sides of the conflict. An additional novel finding is that asset markets respond positively to the success of politicians who favour a negotiated settlement to the conflict.

Article [Talk](#)

[Read](#) [Edit](#) [View history](#) [Tools](#) ▾

From Wikipedia, the free encyclopedia

"Imagined communities" redirects here. For the book, see [Imagined Communities](#).

An **imagined community** is a concept developed by [Benedict Anderson](#) in his 1983 book *[Imagined Communities](#)* to analyze [nationalism](#). Anderson depicts a [nation](#) as a socially-constructed community, imagined by the people who perceive themselves as part of a group.^{[1]:6–7}

Anderson focuses on the way [media](#) creates imagined communities, especially the power of print media in shaping an individual's social psyche. Anderson analyzes the written word, a tool used by churches, authors, and media companies (notably books, newspapers, and magazines), as well as governmental tools such as the map, the census, and the museum. These tools were all built to target and define a mass audience in the public sphere through dominant images, ideologies, and language. Anderson explores the racist and colonial origins of these practices before explaining a general theory that explains how contemporary governments and corporations can (and frequently do) utilize these same practices. These theories were not originally applied to the Internet or television.

Origin [\[edit \]](#)

Imagined Communities

Historical argument [\[edit \]](#)

According to Anderson's theory of imagined communities, the main historical causes of nationalism include:

- the increasing importance of mass [vernacular](#) literacy,
- the movement to abolish the ideas of rule by divine right and hereditary monarchy ("the concept was born in an age in which Enlightenment and Revolution were destroying the legitimacy of the divinely ordained, hierarchical dynastic realm....[N]ations dream of being free...The gage and emblem of this freedom is the sovereign state...", 1991, 7);
- and the emergence of [Print capitalism](#) ("the convergence of capitalism and print technology... standardization of national calendars, clocks and language was embodied in books and the publication of daily newspapers")^[2]

All of these phenomena coincided with the start of the [Industrial Revolution](#).^{[2][4]}

Nation as an imagined community [\[edit \]](#)

According to Anderson, [nations](#) are [socially constructed](#).^[5] For Anderson, the idea of the "nation" is relatively new and is a product of various socio-material forces. He defined a nation as "an imagined political community – and imagined as both inherently limited and sovereign".^[6] As Anderson puts it, a nation "is imagine

Imagined Communities

Nation as an imagined community [edit]

According to Anderson, [nations](#) are [socially constructed](#).^[5] For Anderson, the idea of the "nation" is relatively new and is a product of various socio-material forces. He defined a nation as "an imagined political community – and imagined as both inherently limited and sovereign".^[6] As Anderson puts it, a nation "is imagined because the members of even the smallest nation will never know most of their fellow-members, meet them, or even hear of them, yet in the minds of each lives the image of their communion."^[6] While members of the community probably will never know each of the other members face to face, they may have similar interests or identify as part of the same nation. Members hold in their minds a mental image of their affinity: for example, the nationhood felt with other members of your nation when your "imagined community" participates in a larger event such as the [Olympic Games](#).

Nations are "limited" in that they have "finite, if elastic boundaries, beyond which lie other nations".^[6] They are "sovereign" since no dynastic monarchy can claim authority over them, in the modern period:

[T]he concept was born in an age in which Enlightenment and Revolution were destroying the legitimacy of the divinely-ordained, hierarchical dynastic realm. Coming to maturity at a stage of human history when even the most devout adherents of any universal religion were inescapably confronted with the living pluralism of such religions, and the allomorphism [incongruence, divide] between each faith's ontological claims and territorial stretch, nations dream of being free, and, if under God, directly so. The gauge and emblem of this freedom is the sovereign state.^[6]

Even though we may never see anyone in our imagined community, we still know they are there through communication means such as newspapers. He describes the act of reading a daily paper as a "mass ceremony":

"It is performed in silent privacy, in the lair of the skull. Yet each communicant is well aware that the ceremony he performs is being replicated simultaneously by thousands (or millions) of others of whose existence he is confident, yet of whose identity he has not the slightest notion." (35)

Finally, a nation is a [community](#) because,

regardless of the actual inequality and exploitation that may prevail in each, the nation is always conceived as a deep, horizontal comradeship. Ultimately it is this fraternity that makes it possible, over the past two centuries, for so many millions of people, not so much to kill, as willingly to die for such limited imaginings.^[6]

Nation-Building and Education

Alberto Alesina, Paola Giuliano & Bryony Reich

Nation Building

Nations stay together when citizens share enough values and preferences and can communicate with each other. Democracies and dictatorships have different incentives when it comes to choosing how much and by what means to homogenize the population, i.e. “to build a nation”. We study and compare nation-building policies under the transition from dictatorship to democracy in a model where the location and type of government and the borders of the country are endogenous. We find that the threat of democratization provides the strongest incentive to homogenize. We focus upon a specific nation-building policy: the provision of mass primary education. As a motivation, we offer historical discussions of several episodes in the nineteenth century and suggestive correlations for a large sample of countries over the 1925-2014 period.

Nation Building

“There cannot be a firmly established political state unless there is a teaching body with definitely recognized principles. If the child is not taught from infancy that he ought to be a republican or a monarchist, a Catholic or a free-thinker, the state will not constitute a nation; it will rest on uncertain and shifting foundations; and it will be constantly exposed to disorder and change.” Napoleon I, 1805¹

In 1860 French was still a foreign language to half of all French children.² Outside major cities, France was a country of different languages, dialects and diverse currencies.³ Travel far outside one's own village was rare, and indifference or hostility to the French state common.⁴ From the French Revolution and throughout the 19th century, French rulers expressed the imperative “to form French citizens”.⁵ Following the unification of Italy (1860), a process led by a Northern elite which then ruled the country, Massimo d’Azeglio (one of the founders of unified Italy) famously remarked: “Italy has been made; now it remains to make Italians.” In

Abstract

This paper studies nation-building. We explore the role of state-sponsored education in the adoption of a common language and the formation of a national identity in a fragmented society. At the time of the French Revolution, only ten percent of the population spoke the French language in France. Today, French is the common language. We digitize a detailed survey of the languages spoken across municipalities in France to document the process of homogenization in the nineteenth century. Using a regression discontinuity design, we demonstrate that state-sponsored education brought about the homogenization of language. Then, we study the geographical origins of the French language and the heterogeneous effects of schools. We find that elites and the demand for education were important drivers of homogenization. Finally, we document a persistent impact of nation-building on national identity and preferences for political centralization, with increased participation in the Resistance during World War II and votes against the 1969 referendum on regionalization.

MIRÈIO

CANT PROUMIE

LOU MAS DI FALABREGO.

Cante uno chato de Provenço,
Dins lis amour de sa jouvènço,
À través de la Crau, vers la mar, dins li bla,
Umble escoulan dóu grand Oumèro,
Ieu la vole seguí. Coume èro
Rèn qu'uno chato de la terro,
En foro de la Crau se n'es gaire parla.

Enai soun front noun l'aguèsse
Que de jouïnesso; enai n'aguèsse
Ni diadèmo d'or ni mantèu de Damas,
Vole qu'en glori fugue aussado
Coume uno rèino, e caressado
Pèr nosto lengo m'espresado,
Car cantan que pèr vautre, o pastre e gènt di mas!

(Panel A) Provençal

CHANT PREMIER

LE MAS DES MICOCOULES. (I)

Je chante une jeune fille de Provence. — Dans
les amours de sa jeunesse, — à travers la Crau bleue,
vers la mer, dans les blés, — humble écolier du
grand Homère, — je veux la suivre. Comme c'é-
tait — seulement une fille de la glèbe, — en
dehors de la Crau il s'en est peu parlé.

Bien que son front ne brillât — que de jeun-
se; bien qu'elle n'eût — ni diadème d'or ni man-
teau de Damas, — je veux qu'en gloire elle soit
élevée — comme une reine, et caressée — par
notre langue inépuisée, — car nous ne chantons
que pour vous, ô pères et habitants des mas.

(Panel A) Map of *ciel* (“sky”)

(Panel B) With municipalities

French: Nation Building

Figure 7: Schools and linguistic distance from French

Note: This figure plots linguistic distance from French against population around the discontinuity introduced by the school-building policy. Each point plots the average value within a bin, partialled out of the full set of controls used in Appendix Table A4. Linguistic distance from French is defined as the Levenshtein distance from Le Plessis-Robinson. We apply a local-polynomial fit of order 2 and a mean-squared-error optimal bandwidth for local-polynomial estimation. We rely on an evenly spaced mimicking-variance optimal number of bins. Observations are at the municipality level.

French: Nation Building

Figure 9: Heterogeneous effect of schools: local elites

Note: This figure displays the effect of schools on linguistic distance from French—at low and high levels of presence of local elites—using the discontinuity introduced by the school-building policy. Linguistic distance from French is defined as the Levenshtein distance from Le Plessis-Robinson. School is defined as a dummy variable that equals 1 if population at the time of the law was above five hundred. The presence of local elites is proxied by the log of subscriptions to the *Encyclopedie* per capita within a 50 km buffer around each municipality (available at the municipality level) and is coded as high if it is above the median value. We apply a local-polynomial fit of order 0, for ease of interpretation of the interaction term, and a mean-squared-error optimal bandwidth for local-polynomial estimation. We present the results for other polynomial degrees in Appendix Table A16. The regression-discontinuity coefficient is estimated with ordinary least squares (see Appendix Table A5). Observations are at the municipality level, and standard errors are clustered at the municipality level. Source: Darnton (1973) for presence of local elites.

French: Nation Building

(Panel A) Resistance heroes (WWII)

(Panel B) 1969 Referendum on regionalization

Figure A26: Heterogeneous effect of schools: educational demand

Note: This figure displays the effect of schools on linguistic distance from French—at low and high levels of increase in the number of students in public schools following passage of the Guizot Law—using the discontinuity introduced by the law. Linguistic distance from French is defined as the Levenshtein distance from Le Plessis-Robinson. School is defined as a dummy variable that equals 1 if population at the time of the law was above five hundred. The rate of increase in the number of students in public schools from 1833 to 1850 is available at the *département* level, and it is coded as high if it is above the median value. We apply a local-polynomial fit of order 0, for ease of interpretation of the interaction term, and a mean-squared-error optimal bandwidth for local-polynomial estimation. We present the results for other polynomial degrees in Appendix Table A16. The regression-discontinuity coefficient is estimated with ordinary least squares (see Appendix Table A5). Observations are at the municipality level, and standard errors are clustered at the *département* level. Source: Statistique Générale de la France (n.d.a) for increase in the number of students.

Abstract

We study the causal effect of school curricula on students' political attitudes, exploiting a major textbook reform in China between 2004 and 2010. The sharp, staggered introduction of the new curriculum across provinces allows us to identify its causal effects. We examine government documents articulating desired consequences of the reform and identify changes in textbooks reflecting these aims. A survey we conducted reveals that the reform was often successful in shaping attitudes, while evidence on behavior is mixed. Studying the new curriculum led to more positive views of China's governance, changed views on democracy, and increased skepticism toward free markets.

Curriculum and Ideology

Curriculum and Ideology

We identify five broad categories of attitudes the government wished to affect: (i) views on governance, (ii) views on Chinese political institutions, (iii) views on economic institutions, (iv) students' views on Chinese identity, and (v) attitudes toward the environment. In addition to studying the effect of the new curriculum on these attitudes, we also study (vi) behavior related to the attitudes we examine (specifically, self-reported political behavior, economic choices, and past cooperation with Chinese ethnic minorities).

B.3 A few words on the new senior high school Politics textbook, from the author (2009)

In July 2009, the chair of the committee in charge of rewriting the Politics textbook, Tian Xinming, who was appointed by the Ministry of Education, published an essay on his thoughts on the new textbook.¹ To our knowledge, this is the only example of the author of a Chinese textbook reflecting on how he wrote the textbook. The following are translated excerpts:

The new textbook features two prominent characteristics: First, it unequivocally upholds the correct political and ideological point of view, as well as Marxist education. Second, it reflects the basic concepts of the curriculum reform, focusing on guiding the learning process.

...

Curriculum and Ideology

[Regarding new material that needed to be covered in the textbook.] The CCP's basic guiding principles, which are explicitly summarized and stated in the Party's 15th congress: namely, the basic goals and policies of the construction of the Socialist economy, politics, and culture with Chinese characteristics. This is the expansion of the CCP's basic roadmap, and the curriculum needs to accurately reflect this. After the Party's 16th congress, the CCP introduced the strategic ideology of a harmonious society. These ideas must also be promptly reflected in the new curriculum, and become a part of the moral and ideological educational content.

...

In order to write the textbook well, we must maintain a correct and clear understanding of the current ideological and political situation. The overall situation of China's ideological theory field is good. The mainstream is positive and healthy. However, the ideological field is not peaceful. There exist noises: ideological struggles and competition; foreign hostile forces' attempts to westernize or separate China. This would be reflected in the textbook writing process.

Curriculum and Ideology

4. Ministry of Education's "Curriculum Framework for Senior High School Politics Subject" (2004)

The goals of the Politics subject:

1. Knowledge:

- Know that the Chinese Communist Party has always represented the development trend of China's advanced productive forces, the orientation of China's advanced culture, and the fundamental interests of the overwhelming majority of the Chinese people.
- Understand the meaning of developing socialist market economy, the socialist democracy, and the socialist advanced culture.
- Know the principles and the basic methodology of materialism and historical materialism.
- Understand contemporary China's basic needs for moral construction among its citizens, as well as the establishment of China's rule of law.
- Obtain the relevant knowledge in order to make the correct decisions regarding career development.

Curriculum and Ideology

Table C.2: Search words (five main categories)

Word in English	Word in Chinese	Count in Old Curr.	Count in New Curr.	Percent Change in Frequency
Party	党	33	250	537%
Homeland	祖国	1	51	4,191%
Socialism with Chinese characteristics	中国特色 社会主义	4	97	1,940%
Our country	我国	429	512	0.4%
Chinese ethnic group	中国民族	1	100	8,313%
Nation	国家	508	648	7%
Ethnicity	民族	19	500	2,114%
Inheritance	传统	8	117	1,130%
Fine tradition	党	1	4	237%
Socialism	社会主义	246	440	50%
Moderately prosperous society	小康社会	0	26	∞
Patriotism	爱国主义	2	21	783%
Citizen	公民	55	184	181%
Environment	环境	10	52	337%
Unity	团结	5	49	724%

Curriculum and Ideology

- Students exposed to the new curriculum:
 - Have greater trust in government officials.
 - View government officials as more civic-minded.
 - see bribery as less prevalent and effective.
 - See China as more democratic and view individuals' political participation as a defining characteristic of democracy.
 - But are more skeptical of unconstrained democracy.
 - Have more skeptical views of unconstrained free markets.

Curriculum and Ideology

- Students exposed to the new curriculum:
 - Have greater trust in government officials.
 - View government officials as more civic-minded.
 - see bribery as less prevalent and effective.
 - See China as more democratic and view individuals' political participation as a defining characteristic of democracy.
 - But are more skeptical of unconstrained democracy.
 - Have more skeptical views of unconstrained free markets.
- On the other hand:
 - Students express somewhat more “multiethnic” views of Chinese national identity.
 - Express a somewhat stronger sense of their own national identity.
 - (not statistically significant).
 - The new curriculum did not cause students to favor policies protecting the environment.
 - Perhaps because environmental protection can be seen as opposed to economic growth—another high priority.

Curriculum and Ideology

- Behavior
 - Students exposed to the new curriculum engage in significantly less risky investment activity (investing in stocks and bonds), consistent with viewing markets with more skepticism.
 - Not associated with significantly different rates of cooperating with ethnic minorities.
 - Slightly more political activity (not statistically significant).

Curriculum and Ideology

CHANGES IN WORD COUNTS FOR FIVE BROAD CATEGORIES OF INTEREST

H: National identity

Curriculum and Ideology

Curriculum and Ideology

Category: Governance

Panel A: Trust in government officials

A.1–6. Describe your level of trust in the following institutions: (1 = complete distrust; 5 = complete trust)

A.1. Central government

A.2. Provincial government

A.3. Local government

A.4. Courts

A.5. Armed forces

A.6. Police

Curriculum and Ideology

- B.3–7. In your opinion, how often is it necessary for people like you to have to make unofficial payments/gifts in these situations: (1 = always; 5 = never)
- B.3. Interacting with the traffic police?
 - B.4. Requesting official documents (such as passport or birth certificate)?
 - B.5. Interacting with the civil courts?
 - B.6. Interacting with the providers of primary or secondary education?
 - B.7. Interacting with doctors?
 - B.8. Do you think that paying a bribe is an acceptable way to accomplish something? (1 = no)
 - B.9. Do you think that paying a bribe is an effective way to accomplish something? (1 = no)
 - B.10. From the perspective of local government officials, do you think they would accept a bribe when it is offered to them? (1 = no)

Curriculum and Ideology

Panel G: Ethnic identity

- G.1. Generally speaking, would you say that people in minority groups can be trusted, or that you cannot be too careful in dealing with them? (1 = cannot be too careful; 5 = completely trustworthy)
- G.2. China is a country made up of multiple ethnic groups. Which one of the following statements regarding ethnic minority groups do you agree with more? (a) Compared to Han Chinese, ethnic minority groups are relatively independent groups. (coded as 0) (b) Ethnic minority groups are the same as Han Chinese, and they are all Chinese people. (coded as 1)
- G.3. China is a country made up of multiple ethnic groups. Which one of the following statements regarding ethnic minority groups do you agree with more? (a) Ethnic minority groups share the same historic heritage and cultural traditions as the Han Chinese. (coded as 1) (b) Ethnic minority groups have different historic heritage and cultural traditions from the Han Chinese. (coded as 0)
- G.4. Can you imagine yourself marrying a member of a different ethnic group in the future? (1 = yes)

Curriculum and Ideology

Panel H: National identity

H.1. Where would you place your identity on a spectrum, with being Chinese on one end (5) and being a world citizen on the other end (1)?

Category: Environment

Panel I: Attitudes about environment

I.1. Would you be willing to give part of your income or pay more taxes, if you were sure that the extra money was used to protect the environment?
(1 = yes)

Abstract

Do forced assimilation policies always succeed in integrating immigrant groups? This article examines how a specific assimilation policy—language restrictions in elementary school—affects integration and identification with the host country later in life. After World War I, several U.S. states barred the German language from their schools. Affected individuals were less likely to volunteer in World War II and more likely to marry within their ethnic group and to choose decidedly German names for their offspring. Rather than facilitating the assimilation of immigrant children, the policy instigated a backlash, heightening the sense of cultural identity among the minority.

Backlash to Language Prohibition

2.2. *WWI, anti-Germanism, and language restrictions*

The outbreak of the First World War made the large German community the focus of American patriotic reaction. The growing anti-Germanism of the early war years, which was further agitated by the insistence of the German-American press on strict American neutrality, found its expression in a series of both spontaneous and organized acts of harassment and persecution once the U.S. entered the war in 1917. Numerous German-Americans were arrested as spies or forced to demonstrate their loyalty by buying liberty bonds under the threat of vandalism or tarring and feathering. The hanging of Robert Prager in Collinsville, Illinois, was the most well known in a series of lynching attacks against German-Americans (Luebke, 1974). Berlin, Michigan, was renamed to Marne in honour of the American soldiers who fought in the Second Battle of Marne. Hamburgers became “liberty steaks”⁵ and sauerkraut consumption fell by 75% in the period 1914–1918 (*New York Times*, 25 April 1918). Moser (2012) shows that the number of German-language operas staged at the New York Metropolitan Opera fell dramatically during the war years.

Counties on the borders of Indiana and Ohio

Backlash to Language Prohibition

3.1. *Laws*

Both Indiana and Ohio explicitly singled out German as a language to be prohibited in elementary school grades in 1919.⁷ The law in Ohio reads as follows:

That all subjects and branches taught in the elementary schools of the state of Ohio below the eighth grade shall be taught in the English language only...Provided, that the German language shall not be taught below the eighth grade in any of the elementary schools of this state. (108 Ohio Laws, 614, 1919)

The wording was almost identical in Indiana:

All private and parochial schools...shall be taught in the English language only...provided, that the German language shall not be taught in any such schools within this state. (School Laws of Indiana, 1919)

Notes: The table shows the values of the German name index for the 10 highest-scoring (left panel) and 10 lowest-scoring (right panel) names of males born in 1910 in the 1930 5% IPUMS sample. Highest-scoring names are chosen among names that appear at least 1,000 times in the 1930 sample and are ordered by their GNI value; lowest-scoring names are ordered by popularity. See Section 3.2 and Section B.2 of the [Supplementary Appendix](#) for details on the construction of the GNI.

Backlash to Language Prohibition

B.2 German Name Index

The German Name Index follows Fryer and Levitt (2004) and is constructed as follows

$$\text{GNI}_{\text{name},c} = \frac{\text{Pr}(\text{name}|\text{German}_c)}{\text{Pr}(\text{name}|\text{German}_c) + \text{Pr}(\text{name}|\text{non-German}_c)} \times 100$$

where c indexes birth cohorts. To compute this index, I use information from the 1930 5% IPUMS sample (Ruggles et al., 2010) and define $\text{Pr}(\text{German})$ as the share of foreign-born individuals in the census that were born in Germany. The non-German

FIGURE 5

Estimated effects of language ban by birth cohort bin

Notes: The figure shows coefficient estimates and 95% confidence intervals from a regression of each outcome on state and birth cohort fixed effects and a set of interactions of 3-year birth cohort bins with an indicator for a language ban. The vertical line in year 1903 indicates the first cohort to be affected by the language ban.

Political Secularism and Muslim Integration in the West: Assessing the Effects of the French Headscarf Ban

AALA ABDELGADIR *Stanford University*

VASILIKI FOUKA *Stanford University*

In response to rising immigration flows and the fear of Islamic radicalization, several Western countries have enacted policies to restrict religious expression and emphasize secularism and Western values. Despite intense public debate, there is little systematic evidence on how such policies influence the behavior of the religious minorities they target. In this paper, we use rich quantitative and qualitative data to evaluate the effects of the 2004 French headscarf ban on the socioeconomic integration of French Muslim women. We find that the law reduces the secondary educational attainment of Muslim girls and affects their trajectory in the labor market and family composition in the long run. We provide evidence that the ban operates through increased perceptions of discrimination and that it strengthens both national and religious identities.

Headscarf Ban

FIGURE 1. Prevalence of Laws Regulating Veiling across Europe

Note: The figures describe the status of veiling laws. The left panel illustrates the prevalence of headscarf laws. The right panel maps the prevalence of full-face veil (burqa or niqab) laws. Laws include bans implemented in all public spaces or specific contexts such as schools or courts. "Local" and "national" refer to the level of government that implements the law. Data is from the European Commission (2017) and Open Society Foundations (2018).

Headscarf Ban

Rates of Secondary Education Completion by Birth Cohort for French-Born Women

FIGURE 3. Effects on Self-Reported Measures of Identity

Note: The figure plots coefficient estimates and 90% confidence intervals from the interaction between Muslim religion and an indicator for individuals born after 1985. The regression controls for birth cohort and religion fixed effects, as well as for a linear Muslim-specific age trend. The sample consists of French-born women born 1980 or later. For all outcomes but religiosity the sample is restricted to women with foreign-born parents. Outcomes are standardized and estimated effects can be interpreted in terms of standard deviations.
